

## Quick Reference Guide

# Wire Payment Import for Webster Web-Link®

This guide provides information on the standard U.S. domestic wire file specifications for the Wire Payment Import feature in Web-Link. In order to import a file, an import profile must first be created. Refer to page 5 for details on creating an import profile.

The Payment Import module is found under the Payments tab on the navigational bar. Click on Payments to get to the Import function.

Depending on your entitlements, the top navigation bar may appear different, e.g. Home instead of Treasury Dashboard

### General Requirements for Importing Wires:

Files for import must meet certain requirements to ensure the data is imported correctly.

#### Standard CSV Format

- Standard CSV ("comma-separated value") format requires that fields in the file are in a specific order  
**Note:** Certain fields are always required regardless of the file format and are based on business rules

#### Important File Requirements for Wires

The following requirements apply to the Standard CSV format:

- When an optional field is to be omitted, use a comma in the place of the omitted value. This will result in two consecutive commas
- Leading and trailing white space (i.e., blank space) is ignored, unless the field is delimited with double-quotes, in which case the white space is preserved
- Commas are permitted within a field if they are surrounded with double-quotes
- Double-quotes are permitted within a field if the entire field is enclosed in double-quotes. In addition, each of the embedded double-quotes must be represented by a pair of consecutive double quotes. For example, you would need the following:  
"This field includes ""double-quotes"" inside a set of double-quotes."  
To render the following results:  
This field includes "double-quotes" inside a set of double-quotes.
- Amounts can be entered with or without a decimal position

#### Additional Requirements for the Standard CSV Format

The Standard CSV format is more structured than simply being delimited with commas. The key elements that characterize a standard CSV file are:

- Each file must include a header record, a trailer record, and at least one payment record, and
- Each record must be on a separate line

# Wire Payment Import for Webster Web-Link®

## Sample Fedwire Format (U.S. Domestic Wire):

### Header Format

- Character Type: A=alphanumeric, N=numeric
- \*R/C/O identifies if the field is one of the following: **Required** / **Conditional** / **Optional**

The following table describes the required Standard CSV Header format for importing Fedwire payments:

| POS | Data Field         | Format/Validation Comments   | Character Length / Type | *R/C/O |
|-----|--------------------|--|-------------------------|--------|
| 1   | Payment Identifier | Must be "PAYMENT"  | 7/A                     | R      |
| 2   | Header Identifier  | Must be "HEADER"   | 6/A                     | R      |
| 3   | Date               | MMDDYYYY   | 8/N                     | R      |
| 4   | Not Used           |  |                         |        |
| 5   | Batch Number       | A sequential batch number. The number increases with any batches done by any user for the same customer on the same day. | 4/N                     | R      |

### Import Validations - Fedwire Payments

The following table describes the required Standard CSV record format for importing Fedwire payments:

| CSV POS | Field Name                | Field Validations   | *R/C/O |
|---------|---------------------------|---|--------|
| 1       | Record Type               | Required value: Payment   | R      |
| 2       | Payment Type              | Required value: FW  | R      |
| 3       | Sender's Reference Number | Maximum 16 characters   | O      |
| 4       | Value Date                | <ul style="list-style-type: none"> <li>• Date in the format: mmdyyy</li> <li>• Is within a maximum number of days configured in a properties file at implementation time.</li> <li>• A business day according to the configured schedule for the payment type</li> </ul> <b>Note:</b> Holidays and non-processing days are taken into account when determining whether a date is valid. | R      |
| 5       | Debit Account #           | <ul style="list-style-type: none"> <li>• Must match an account in the database</li> <li>• Maximum 34 characters</li> </ul>  | R      |
| 6       | Debit Account Currency    | Three-character ISO currency code   | R      |
| 7       | Debit Account Bank ID     | Maximum 34 characters   | R      |
| 8       | Debit Amount              | <ul style="list-style-type: none"> <li>• Numeric</li> <li>• Maximum 13 characters (includes decimal)</li> </ul>   | R      |

| 46      | Receiving Bank Name                | Required if either of the following are true: <ul style="list-style-type: none"> <li>The form of bank identification is the bank name (with no bank ID provided)</li> <li>The form of bank identification being provided is the bank ID; however, the ID type = Account</li> </ul> | C      |
| 47-49   | Receiving Bank Address Line 1-3    | Lines one and two are required if a receiving bank is entered and if the form of bank identification is the bank name. Line three is optional.   | C      |

### Trailer Format

The following table describes the required Standard CSV Trailer format for importing Fedwire payments.

| POS | Data Field              | Format/Validation Comments  | Character Length / Type | *R/C/O |
|-----|-------------------------|---|-------------------------|--------|
| 1   | Payment Identifier      | Must be "PAYMENT"   | 7/A                     | R      |
| 2   | Trailer Identifier      | Must be "TRAILER"   | 7/A                     | R      |
| 3   | Hash Total of Amounts   | The hash total amount of transactions, without a currency symbol or decimal point | 20/N                    | R      |
| 4   | Total Number of Records | The number of detail records in the file  | 15/N                    | R      |

# Wire Payment Import for Webster Web-Link®

## Creating an Import Profile:

### Payments > Import Profiles

The Manage Import Profiles screen lists the Import Profiles you have created:

| Manage Payment Import Profiles                           |                             |              |                          |        |  |  |
|--|-----------------------------|--------------|--------------------------|--------|--|--|
| Use this page to create, edit or delete Import Profiles. |                             |              |                          |        |  |  |
|  |                             |              |                          |        |  | Print-Friendly   |
|  |                             |              |                          |        |  | Items per page   |
| Profile Name   | File Format<br>Payment Type | Format Type  | File Content Type        | Access | Last Modified By<br>Last Modified Date | Action   |
| <a href="#">Standard CSV - Wire</a>                      | Wire Standard<br>N/A        | Standard CSV | Non-Replicative Payments | Public | apearlman<br>12/01/2017                | <a href="#">Import</a> <a href="#">Edit</a> <a href="#">Delete</a> |

1. To create an Import Profile, click the Create Import Profile button.
2. Select the file format. In the example below, the Wire Standard format is selected. Click Continue.

3. On the next screen, select Profile Access (public or private). If the option to check for duplicate files is selected, any duplicate files will be rejected. Click Continue and a preview screen will display.

4. Click Submit Profile. The profile will now display in the Manage Import Profiles screen. Each time you import a file, simply click on the Import button under the Action column of the import profile selection. Then select your file from your network and click Import File.
5. The Payment Center screen will display the pending payment with the instructions populated from the wire file.
